

## Considering categorical data

---

## Contingency tables

A table that summarizes data for two categorical variables is called a *contingency table*.

## Contingency tables

A table that summarizes data for two categorical variables is called a *contingency table*.

The contingency table below shows the distribution of students' genders and whether or not they are looking for a spouse while in college.

		looking for spouse		Total
		No	Yes	
gender	Female	86	51	137
	Male	52	18	70
	Total	138	69	207

# Bar plots

A *bar plot* is a common way to display a single categorical variable. A bar plot where proportions instead of frequencies are shown is called a *relative frequency bar plot*.

# Bar plots

A *bar plot* is a common way to display a single categorical variable. A bar plot where proportions instead of frequencies are shown is called a *relative frequency bar plot*.

How are bar plots different than histograms?

# Bar plots

A *bar plot* is a common way to display a single categorical variable. A bar plot where proportions instead of frequencies are shown is called a *relative frequency bar plot*.

## How are bar plots different than histograms?

*Bar plots are used for displaying distributions of categorical variables, while histograms are used for numerical variables. The x-axis in a histogram is a number line, hence the order of the bars cannot be changed, while in a bar plot the categories can be listed in any order (though some orderings make more sense than others, especially for ordinal variables.)*

## Choosing the appropriate proportion

Does there appear to be a relationship between gender and whether the student is looking for a spouse in college?

		looking for spouse		Total
		No	Yes	
gender	Female	86	51	137
	Male	52	18	70
	Total	138	69	207

## Choosing the appropriate proportion

Does there appear to be a relationship between gender and whether the student is looking for a spouse in college?

		looking for spouse		Total
		No	Yes	
gender	Female	86	51	137
	Male	52	18	70
	Total	138	69	207

To answer this question we examine the row proportions:

## Choosing the appropriate proportion

Does there appear to be a relationship between gender and whether the student is looking for a spouse in college?

		looking for spouse		Total
		No	Yes	
gender	Female	86	51	137
	Male	52	18	70
	Total	138	69	207

To answer this question we examine the row proportions:

- % Females looking for a spouse:  $51/137 \approx 0.37$

## Choosing the appropriate proportion

Does there appear to be a relationship between gender and whether the student is looking for a spouse in college?

		looking for spouse		
		No	Yes	Total
gender	Female	86	51	137
	Male	52	18	70
	Total	138	69	207

To answer this question we examine the row proportions:

- % Females looking for a spouse:  $51/137 \approx 0.37$
- % Males looking for a spouse:  $18/70 \approx 0.26$

## Segmented bar and mosaic plots

What are the differences between the three visualizations shown below?

## Example: Marbles

Imagine an urn contains 100 marbles, each having a color and a pattern. The colors are green, violet, and blue. The patterns are checkered, dotted, and striped. The frequencies (counts) are shown in the contingency table.

	checkered	dotted	striped	total
green	20	18	21	59
violet	8	9	3	20
blue	12	3	6	21
total	40	30	30	100

There are a variety of interesting proportions: simple part of whole, compound part of whole, and part of part.

## Marbles - Simple (Marginal) Proportions

	checkered	dotted	striped	total
green	20	18	21	59
violet	8	9	3	20
blue	12	3	6	21
total	40	30	30	100

Simple part of whole:

- What proportion of marbles are checkered?

## Marbles - Simple (Marginal) Proportions

	checkered	dotted	striped	total
green	20	18	21	59
violet	8	9	3	20
blue	12	3	6	21
total	40	30	30	100

Simple part of whole:

- What proportion of marbles are checkered?  $\frac{40}{100} = 0.40$
- What proportion of marbles are green?

## Marbles - Simple (Marginal) Proportions

	checkered	dotted	striped	total
green	20	18	21	59
violet	8	9	3	20
blue	12	3	6	21
total	40	30	30	100

Simple part of whole:

- What proportion of marbles are checkered?  $\frac{40}{100} = 0.40$
- What proportion of marbles are green?  $\frac{59}{100} = 0.59$
- What proportion of marbles are striped?

## Marbles - Simple (Marginal) Proportions

	checkered	dotted	striped	total
green	20	18	21	59
violet	8	9	3	20
blue	12	3	6	21
total	40	30	30	100

Simple part of whole:

- What proportion of marbles are checkered?  $\frac{40}{100} = 0.40$
- What proportion of marbles are green?  $\frac{59}{100} = 0.59$
- What proportion of marbles are striped?  $\frac{30}{100} = 0.30$
- What proportion of marbles are blue?

## Marbles - Simple (Marginal) Proportions

	checkered	dotted	striped	total
green	20	18	21	59
violet	8	9	3	20
blue	12	3	6	21
total	40	30	30	100

Simple part of whole:

- What proportion of marbles are checkered?  $\frac{40}{100} = 0.40$
- What proportion of marbles are green?  $\frac{59}{100} = 0.59$
- What proportion of marbles are striped?  $\frac{30}{100} = 0.30$
- What proportion of marbles are blue?  $\frac{21}{100} = 0.21$

## Marbles - Compound Proportions

	checkered	dotted	striped	total
green	20	18	21	59
violet	8	9	3	20
blue	12	3	6	21
total	40	30	30	100

Compound part of whole:

- What proportion of marbles are dotted and violet?

## Marbles - Compound Proportions

	checkered	dotted	striped	total
green	20	18	21	59
violet	8	9	3	20
blue	12	3	6	21
total	40	30	30	100

Compound part of whole:

- What proportion of marbles are dotted and violet?  $\frac{9}{100} = 0.09$
- What proportion of marbles are green and striped?

## Marbles - Compound Proportions

	checkered	dotted	striped	total
green	20	18	21	59
violet	8	9	3	20
blue	12	3	6	21
total	40	30	30	100

Compound part of whole:

- What proportion of marbles are dotted and violet?  $\frac{9}{100} = 0.09$
- What proportion of marbles are green and striped?  $\frac{21}{100} = 0.21$
- What proportion of marbles are green or striped?

## Marbles - Compound Proportions

	checkered	dotted	striped	total
green	20	18	21	59
violet	8	9	3	20
blue	12	3	6	21
total	40	30	30	100

Compound part of whole:

- What proportion of marbles are dotted and violet?  $\frac{9}{100} = 0.09$
- What proportion of marbles are green and striped?  $\frac{21}{100} = 0.21$
- What proportion of marbles are green or striped?  
 $\frac{20+18+21+3+6}{100} = 0.68$
- What proportion of marbles are dotted or violet?

## Marbles - Compound Proportions

	checkered	dotted	striped	total
green	20	18	21	59
violet	8	9	3	20
blue	12	3	6	21
total	40	30	30	100

Compound part of whole:

- What proportion of marbles are dotted and violet?  $\frac{9}{100} = 0.09$
- What proportion of marbles are green and striped?  $\frac{21}{100} = 0.21$
- What proportion of marbles are green or striped?  
 $\frac{20+18+21+3+6}{100} = 0.68$
- What proportion of marbles are dotted or violet?  $\frac{30+20-9}{100} = 0.41$

## Marbles - Conditional Proportions

	checkered	dotted	striped	total
green	20	18	21	59
violet	8	9	3	20
blue	12	3	6	21
total	40	30	30	100

Part of part:

- What proportion of violet marbles are dotted?

## Marbles - Conditional Proportions

	checkered	dotted	striped	total
green	20	18	21	59
violet	8	9	3	20
blue	12	3	6	21
total	40	30	30	100

Part of part:

- What proportion of violet marbles are dotted?  $\frac{9}{20} = 0.45$
- What proportion of dotted marbles are violet?

## Marbles - Conditional Proportions

	checkered	dotted	striped	total
green	20	18	21	59
violet	8	9	3	20
blue	12	3	6	21
total	40	30	30	100

Part of part:

- What proportion of violet marbles are dotted?  $\frac{9}{20} = 0.45$
- What proportion of dotted marbles are violet?  $\frac{9}{30} = 0.30$
- What proportion of green marbles are striped?

## Marbles - Conditional Proportions

	checkered	dotted	striped	total
green	20	18	21	59
violet	8	9	3	20
blue	12	3	6	21
total	40	30	30	100

Part of part:

- What proportion of violet marbles are dotted?  $\frac{9}{20} = 0.45$
- What proportion of dotted marbles are violet?  $\frac{9}{30} = 0.30$
- What proportion of green marbles are striped?  $\frac{21}{59} \approx 0.356$
- What proportion of striped marbles are green?

## Marbles - Conditional Proportions

	checkered	dotted	striped	total
green	20	18	21	59
violet	8	9	3	20
blue	12	3	6	21
total	40	30	30	100

Part of part:

- What proportion of violet marbles are dotted?  $\frac{9}{20} = 0.45$
- What proportion of dotted marbles are violet?  $\frac{9}{30} = 0.30$
- What proportion of green marbles are striped?  $\frac{21}{59} \approx 0.356$
- What proportion of striped marbles are green?  $\frac{21}{30} = 0.70$

# Marbles - Mosaic Plot

	checkered	dotted	striped	total
green	20	18	21	59
violet	8	9	3	20
blue	12	3	6	21
total	40	30	30	100

## Marbles - Making a Mosaic Plot

1. Start with a rectangle (a square is good).

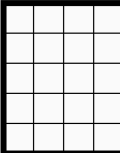

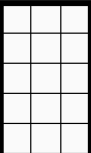

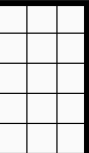

1. Start with a rectangle (a square is good).
2. Find marginal proportions of first variable for widths of columns.

$$\frac{40}{100} = 0.4, \frac{30}{100} = 0.3, \frac{30}{100} = 0.3$$

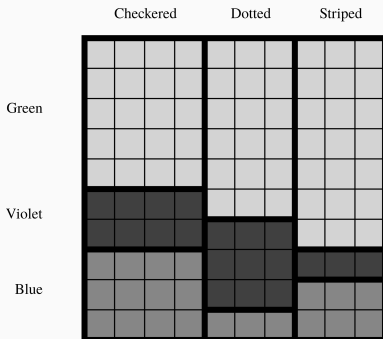

Checked				Dotted				Striped			

1. Start with a rectangle (a square is good).
2. Find marginal proportions of first variable for widths of columns.
3. For heights of rectangles, determine part-of-part proportions, e.g. the proportion of checkered marbles that are green.

$$\begin{array}{lll} \frac{20}{40} = 0.5 & \frac{18}{30} = 0.6 & \frac{21}{30} = 0.7 \\ \frac{8}{40} = 0.2 & \frac{9}{30} = 0.3 & \frac{3}{30} = 0.1 \\ \frac{12}{40} = 0.3 & \frac{3}{30} = 0.1 & \frac{6}{30} = 0.2 \end{array}$$

	Checkered	Dotted	Striped
Green			
Violet			
Blue			

1. Start with a rectangle (a square is good).
2. Find marginal proportions of first variable for widths of columns.
3. For heights of rectangles, determine part-of-part proportions, e.g. the proportion of checkered marbles that are green.
4. Shade according to second variable.

## Independence in Mosaic Plots

If the two variables are independent, then a mosaic plot's horizontal lines will be continuous (unbroken).
