

# MATH 181 2ND EXAM PRACTICE C

## SPRING 2019

Name: \_\_\_\_\_

- Write your **full name** on the line above.
- Show your work. Incorrect answers with work can receive partial credit.
- Attempt every question; showing you understand the question earns some credit.
- If you run out of room for an answer, continue on the back of the page. Before doing so, write “see back” with a circle around it.
- You can use 1 page (front and back) of notes.
- You can use (and probably need) a calculator.
- You can use the Geogebra Scientific Calculator instead of a calculator. You need to put your phone on **airplane mode** and then within the application, start **exam mode**; you should see a green bar with a timer counting up.
- If a question is confusing or ambiguous, please ask for clarification; however, you will not be told how to answer the question.
- **Box your final answer.**
- A formula sheet is attached to this test.

Do not write in this grade table.

Question:	Q1	Q2	Q3	Q4	Q5	Q6	Q7	Q8	Q9	Total
Points:	10	10	10	10	10	10	10	10	10	90
Score:										

**Normal Distribution:**

$$X \sim \mathcal{N}(\mu, \sigma)$$

$\mu$  = population mean

$\sigma$  = population standard deviation

$x$  = possible value of  $X$

$\ell$  = percentile of  $x$  (left area)

$\Phi(z)$  = standard normal cumulative function

$$z = \frac{x - \mu}{\sigma}$$

$$P(X < x) = \Phi(z)$$

$$\ell = \Phi(z)$$

$$z = \Phi^{-1}(\ell)$$

**Bernoulli Distribution:**

$$X \sim \text{Bern}(p)$$

$X = 0$  for fail or 1 for success

$p$  = probability of success

$$P(X = 0) = 1 - p$$

$$P(X = 1) = p$$

$$\mu = p$$

$$\sigma = \sqrt{p(1 - p)}$$

**Geometric Distribution:**

$$X \sim \text{Geo}(p)$$

$X$  = number of trials until first success

$p$  = probability of success on each trial

$n$  = a possible number of trials

$$P(X = n) = (1 - p)^{n-1}(p)$$

$$\mu = \frac{1}{p}$$

$$\sigma = \sqrt{\frac{1 - p}{p^2}}$$

**Mean-Sampling Distribution:**

$\bar{X}$  = sample mean

$s$  = sample standard deviation

$n$  = sample size

$\mu$  = population mean

$\sigma$  = population standard deviation

$SE$  = standard error

$$SE = \frac{\sigma}{\sqrt{n}}$$

If  $n \geq 30$  (or if population is normal) then:

$$\bar{X} \sim \mathcal{N}(\mu, SE)$$

**Binomial Distribution:**

$$X \sim \mathcal{B}(n, p)$$

$X$  = number of successes from  $n$  trials

$p$  = probability of success on each trial

$n$  = number of trials

$k$  = a possible number of successes

$$P(X = k) = \binom{n}{k} p^k (1 - p)^{n-k}$$

$$\mu = np$$

$$\sigma = \sqrt{np(1 - p)}$$

If  $np \geq 10$  and  $n(1 - p) \geq 10$ , then

$$X \sim \mathcal{N}(\mu, \sigma)$$

Continuity correction:

$$P(X \leq k) \approx \Phi\left(\frac{k + 0.5 - \mu}{\sigma}\right)$$

**Confidence Interval:**

$CI$  = confidence interval

$\gamma$  = confidence level

$\bar{x}$  = sample mean

$s$  = sample standard deviation

$$z^* = \Phi^{-1}\left(\frac{\gamma + 1}{2}\right)$$

$$SE \approx \frac{s}{\sqrt{n}}$$

$$CI = \bar{x} \pm z^* SE$$

**Hypothesis testing:**

$$H_0 : \mu = \mu_0$$

$$H_A : \mu \neq \mu_0$$

$\bar{x}$  = a possible/specific/observed sample mean

$s$  = sample standard deviation

$\alpha$  = significance level

$$\sigma \approx s$$

$$z = \frac{\bar{x} - \mu_0}{SE}$$

$$p\text{-value} = P(|Z| > |z|)$$

$$= 2 \cdot \Phi(-|z|)$$

If  $p\text{-value} < \alpha$ , then reject  $H_0$ , else retain  $H_0$ .

**Q1.** (10 points) Let random variable  $X$  be normally distributed with mean  $\mu = 50$  and standard deviation  $\sigma = 12$ . What is the probability that  $X$  is between 46 and 54?

**Q2.** (10 points) Let random variable  $\bar{X}$  be the sample mean of 36 draws from a normally distributed population with mean  $\mu = 50$  and standard deviation  $\sigma = 12$ . What is the probability that  $\bar{X}$  is between 46 and 54?

- Q3.** (10 points) Let random variable  $X$  be normally distributed with mean  $\mu = 50$  and standard deviation  $\sigma = 12$ . What is the  $x$ -score of the 80th percentile?
- Q4.** (10 points) Let random variable  $Y$  be normally distributed with mean  $\mu = 72$  and an unknown standard deviation  $\sigma$ . However, you know the 90th percentile is  $y = 79$ . What is the distribution's standard deviation?
- Q5.** (10 points) Let random variable  $W$  be normally distributed with an unknown mean  $\mu$  and standard deviation  $\sigma = 0.5$ . However, you know the 30th percentile is  $w = 8$ . What is the distribution's mean?

**Q6.** (10 points) Let each trial have a probability of success  $p = 0.61$ .

(a) What is the probability that in 400 trials there are 250 successes?

(b) What is the probability that in 400 trials there are at least 250 successes? (Please use a normal approximation and continuity correction. Also, remember that  $p = 0.61$ .)

- Q7.** (10 points) A random sample of size  $n = 89$  has a mean  $\bar{x} = 23.4$  and a sample standard deviation  $s = 5.6$  (and no apparent skew). Determine a confidence interval of the population's mean using a confidence level of 75%.

**Q8.** (10 points) A population is claimed to have a mean  $\mu = 678$ . However, you are skeptical, so you decide you'll take a random sample and run a two-tail hypothesis test with a significance level  $\alpha = 0.05$ .

Your random sample of size  $n = 211$  results in a sample mean of  $\bar{x} = 664.4$  and a sample standard deviation  $s = 101.3$ . What do you conclude?

**Q9.** (10 points) What is a sampling distribution?
